

## **FOR IMMEDIATE RELEASE**

### **Metametrix Expands to a New State-of-the-Art Facility**

Duluth, GA – July 9, 2007 – Metametrix Clinical Laboratory ([www.mettametrix.com](http://www.mettametrix.com)), a leader in nutritional and metabolic testing, announces its move to a new facility at 3425 Corporate Way in Duluth, Georgia's River Green Business Park. The company moved all employee departments from Norcross, GA, where they have been located for the past seven years. The new laboratory is one of the largest, state-of-the-art specialty testing facilities in the area.

The new building provides over 44,000 square feet of laboratory and office space, more than double the location in Norcross. The new facility has been custom designed to include the most technologically advanced laboratory equipment, a high tech training room for educational seminars, and additional office space for the corporate headquarters. Future expansion plans have also been discussed due to accelerating growth in many of the laboratory's testing fields.

#### About Metametrix

Metametrix Clinical Laboratory has, for the past 23 years, specialized in producing ground-breaking technologies for measuring nutritional, metabolic, and toxic influences on health. Metametrix is a leader and innovator in providing these testing services to healthcare professionals around the world. The latest innovations include the GI Effects Stool Profiles and the Toxic Effects Porphyrins Profile.
