

## Metamatrix Introduces the New TRIAD<sup>SM</sup> Bloodspot Profile The Power of the TRIAD Now Available with a Non-Invasive Collection

Duluth, GA – March 31, 2009 – Are you a practitioner with limited access to blood draw facilities? Do you have patients that resist testing if a blood draw is required? Are you constantly looking for ways to make testing more convenient for your patients? If you answered yes to any of these questions, the TRIAD Bloodspot profile is perfect for your practice.

Metamatrix Clinical Laboratory, a leader in nutritional and metabolic testing services, is pleased to introduce the new TRIAD Bloodspot Profile, a non-invasive specimen collection available for the powerful TRIAD test.

“Our main goal in creating the TRIAD Bloodspot option was to offer a convenient way for clinicians and patients to access this test,” says Dr. J. Alexander Bralley, CEO of Metamatrix Clinical Laboratory. “We are giving more clinicians access to the TRIAD, and offering ease of use for patients who can now complete the sample collection in the comfort of their own homes.”

By integrating results from three different profiles, the TRIAD Bloodspot provides targeted, individualized interventions in one cost-effective package. The TRIAD Bloodspot compiles information from the following tests:

- **Organix<sup>SM</sup> Comprehensive Profile:** Measures organic acid levels to reveal the nutritional and metabolic basis of patient symptoms, including anxiety, mood changes, and immune responses.
- **Bloodspot Amino Acids Plasma 20 Profile:** Determines essential amino acid imbalances that affect both physical and mental function.
- **Allergix<sup>SM</sup> Bloodspot IgG4 Food Antibodies Profile:** Measures the level of IgG4 reactions for 30 common foods, which can cause delayed allergic reactions such as fatigue, depression, migraines, gastrointestinal problems, and recurrent infections.

“The TRIAD Profile provides a broad approach for understanding a patient’s conditions and needs,” states Winston Cardwell, ND, LAc, SPHERIOS Medical Center. “The combination of markers for specific nutrient needs, essential amino acids, and IgG4 food analysis can reveal the core of most common clinical conditions - this profile is an indispensable tool.”

To order your TRIAD Bloodspot Profile today, or to request more information, please call 1-800-221-4640 or visit <http://www.metamatrix.com/triadbs>.

For 25 years, Metamatrix Clinical Laboratory has been an industry leader in producing innovative, Next Generation Technologies<sup>SM</sup> for measuring nutritional insufficiencies, metabolic dysfunction, as well as toxic influences on health. Metamatrix is committed to applying the latest advances in testing services to functional and integrative medicine with a focus on quality, innovation, and education.
