0140 Male Hormone Profile

Methodology: Competitive Immunoassay, Immunometric Assay

	Results	Reference Limits
Testosterone	175 L 	184 - 1,171 ng/dL
Sex Hormone Binding Globulin	13 	13 - 71 nmol/L
Free Androgen Index (calc.)	46.7 	30.0 - 95.0 Ratio
Estradiol	28.0 	<= 56.0 pg/ml
Prostate Specific Antigen (PSA)	4.5 H 	<= 4.0 ng/mL

The reagent manufacturer for this PSA assay is Diagnostic Products Corporation.

Because the concentration of PSA in any given specimen can vary due to differences in assay methods and reagent specificity, values from different assay methods cannot be used interchangeably. Serum PSA levels, regardless of value, should not be interpreted as absolute evidence of the presence or absence of disease.

These guidelines are intended as a starting point for the clinician who requested the test and are based only on the laboratory results included in this report. Final recommendations should be implemented by the clinician with consideration of medical history and current clinical observations.
